

Motor Side Drive with a Timing Belt

Side drive for PNCE Electromechanical cylinder.
Mounting screws are included.

Note: This is an dummy item. The motor flange will be designed after receipt of order and drawing of requested motor type. The geometry of motor flange can be changed in order to adapt it to a requested motor type.

Dimensions in mm.

Max. radial load on shaft on shaft is the load which is linearly dependent on the maximum drive torque M_p , MSD and is generated by the correct pretension of the belt. This load needs to be reduced in accordance with the capabilities of the motor.

Mass in an average value. It could differ depending to the motor dimensions.

N in the table below indicates standard value. It could differ depending to the motor dimensions M and L1.

For order information, see Order Codes. Contact us for CAD-files and further information.

** Minimum dimension L1 depends on the size of particular clamping set. See attached table.
