# PSW 30 - Shaft 8 mm solid

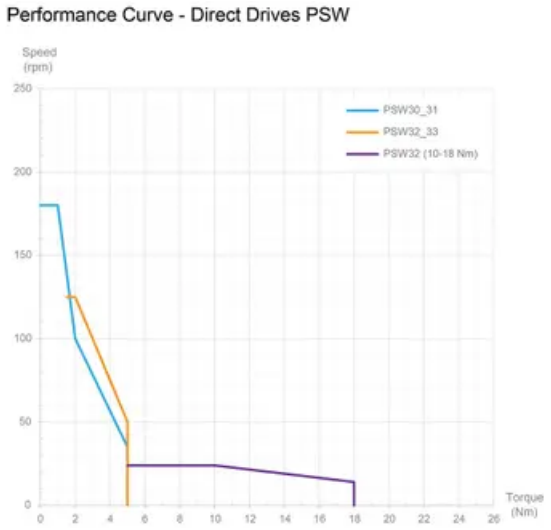

• Positioning system with IP 68
• Absolute measuring system, without battery
• Galvanically separated supply voltages between control and motor and bus
• Absolute encoder eliminates the need for reference runs during system setup and installation of replacements
• Easy address assignment directly on the device using integrated address switches (not for IO-Link)
• Regulation of the current torque prevents overloading and unnecessary run aborts
• Strong breakaway torque enables safe start-up even after an extended standstill
• Intelligent running behaviour. Recognises the difference between obstacles and dirt
• Spindle offset run: Excludes inconsistencies due to lash in the spindle.
• Condition monitoring of supply voltage, drag error (permits optimum adjustment of current position), power consumption and torque
• Partial safety function for STO (Safe Torque Off)
