

Linear Unit MTJ ECO 40

The MTJ ECO series linear unit is a powerful and cost-effective linear unit with toothed belt drive and a zero-backlash ball rail guide system for easy and accurate linear movements.

The linear unit MTJ ECO uses a pre-tensioned steel reinforced AT polyurethane timing toothed belt. In conjunction with a zero-backlash drive pulley high moments with alternating loads with good positioning accuracy, low wear and low noise can be realized.

Modulus of Elasticity: $E = 70000 \text{ N / mm}^2$

Operating Temperature (°C): 0 ~ +60 For operating temperature out of the presented range, please contact Rollco.

Duty Cycle: 100%

Max. Acceleration (m/s²): 70

Max. Travel Speed (m/s): 3

The maximum permissible deflection l_{\max} must not be exceeded. In the case that maximum deflection l exceeds the maximum permissible deflection l_{\max} additional profile supports are needed.

Defining of the linear unit length

$L = \text{Effective stroke} + 2 \times \text{Safety stroke} + L_v + 15 \text{ mm}$

$L_{\text{total}} = L + 174 \text{ mm}$

Left side (L)

$L_v - \text{Long carriage} = 200 \text{ mm}$

$L_v - \text{Short carriage} = 132 \text{ mm}$

General data

For length/stroke over the stated value, please contact Rollco.
 Values for max. stroke are not valid for double carriage (equation of defining the linear unit length for particular size of the linear unit needs to be used).
 For minimum stroke below the stated value, please contact Rollco.

Recommended values of loads

All the data of static and dynamic moments and load capacities stated in the upper table are theoretical without considering any safety factor.
 The safety factor depends on the application and its requested safety.
 We recommend a minimum safety factor ($f_s = 5.0$).
