## Synchronisation Shaft OSR

For longer distances bearing supports needed, please contact Rollco.

Installation:
The overall length $L t$ is best determined as the distance between shaft ends - length Lw plus $2 x$ dimension $H$.

For CAD-files contact Rollco.

Dimensions in mm.
Explanations to the table below:
$\mathrm{Ms}=$ Screw tightening torque ( Nm )
MT = Maximum transmissible torque (Nm)
$\mathrm{CT}=$ Torsional rigidity per meter $(\mathrm{Nm} / \mathrm{rad})$

connections. Torque transmission is zero
connections. Torque transmission is zero
backlash. Designed for lengths up to 4 m without bearing support (depending on rotation speed).

Standard lenghts available up to 3 m .
